### The role of animals in a sustainable diet

**Required proteins**  
We need 50 - 60 grams of protein on average per day

**Sustainable diet**  
Animals can provide 1/3 of our daily protein requirement, without causing competition for land between food and feed

1/3 animal protein

2/3 plant protein

WAGENINGEN UNIVERSITY & RESEARCH

Animals graze land that is not suitable to grow crops

**Animals contribute to optimal land use**  
When 1/3 of the required proteins are of animal sources, 25% less land is needed than with a diet that is fully plant-based

Animals convert residual flows into high-quality proteins for us to eat
